Colors reproduce differently on different digital devices (monitors, scanners, printers, etc). What you see on your computer may or may not be what is delivered. If color is critical, please supply and sample print, and we will attempt to match as close as possible. In some instances, a custom print may be required for critical color matches

Prints from digital cameras are usually formatted to a non-standard size, such as 4"x5.5". When printed on a standard-size paper such as 4"x6", these prints will have panels at the tops or sides; therefore, unless the customer requests otherwise, we will print these images on 4"x6" paper with minimum cropping, thereby eliminating the panels but with slight cropping.
